

Underwater Camera System Control Panel CK-340

Picture shows CK-340 Control Panel.(left) and CK-340 Panel in use with 20" LCD Monitor (right)

DESCRIPTION

The CK-340 control panel is a highly flexible solution, allowing control over cameras and winches in many different configurations. This robust, aluminum housed panel is highly specified and has been designed for daily use as part of a feed monitoring system.

The panel can be used as a selector and controller for any of our multi camera systems and allows full pan and tilt control over our BC300 series underwater cameras. The winch control provides up/down/back/forth control over our BV series winches when used with one of our relay boxes. BC300 pan/tilt or BC100 fixed cameras can also be connected directly to the panel using the 13 pin female connection. A large LED display indicates which camera has been selected. Connection to a monitor is easy thanks to both RCA phono and BNC video outputs.

FEATURES

Model	:	CK-340
Joysticks	:	<ul style="list-style-type: none"> ➤ Camera Pan / Tilt ➤ Winch Up / Down and In / Out
Rotating Camera switch	:	Camera select
LED display	:	Shows selected camera
